Application Number 10/716,379**LISTING OF CLAIMS**

The following listing of claims will replace all prior versions and listings of claims in the application:

1-3. (Canceled).

4. (Currently amended) A method for determining whether a composition modulatesinhibits the activity of a Pin1 activity protein having the amino acid sequence set forth in SEQ ID NO: 2, said method comprising:

incubating the composition with a Pin1 protein having the amino acid sequence set forth in SEQ ID NO: 2 or a functional fragment thereof, wherein the functional fragment of the Pin1 protein has protein-protein interaction activity and/or peptidyl prolyl isomerase activity, or with a recombinant cell expressing the Pin1 protein or a functional fragment thereto, under conditions sufficient to allow the components of the composition to interact with the Pin1 protein or functional fragment thereof; and

determining the effect of the composition on the Pin1 protein activity.

5-8. (Canceled).

9. (Currently amended) The method of claim 4, wherein the Pin1 protein activity is protein-protein interaction.

10. (Currently amended) The method of claim 4, wherein the Pin1 protein activity is peptidyl-prolyl isomerase activity.

11-15. (Canceled).

16. (Currently amended) The method of claim 4, wherein the functional fragment comprises at least amino acid residues 59-163 of SEQ ID NO: 2.

PATENTAttorney Reference Number 7158-71253-12  
Application Number 10/716,379

17. (Currently amended) The method of ~~claim 13~~claim 4, wherein the functional fragment comprises at least amino acid residues 5-43 of SEQ ID NO: 2.

18-19. (Canceled).

20. (New) The method of claim 9, wherein the Pin1 protein activity is the binding of the Pin1 protein to a functional fragment of NIMA.

21. (New) The method of claim 10, wherein the peptidyl prolyl isomerase activity is not inhibited by cyclosporine A or FK520.
